Inventory Application

Carlson INC.

Objective: Development of a plug in Inventory Management Application that works for your technicians to speed up inventory validation across Network Infrastructure saving your corporation time and money. Technicians need a inventory system that tracks of actionable inventory that is user friendly, efficient and accurate to have that equipment on hand for your customers.

- Efficient in Validating Inventory by CLLI or product information.

- Software is portable and can be utilized as a stand-alone platform.

- Identify available, in-service, lost, pending return, and spare equipment.

- Ability to change status and inventory counts.

- Create return shipping document to return inventory.
